

8 CyberSecurity Blogs You Should Follow in 2018

1. **Tech News World:** Tech News World is an awesome online publication that covers absolutely everything, from emerging tech, data management, internet of things, and whatever news the tech world is buzzing about!

We love this resource because of the reader services. This is so much more than just a blog! You can easily dive into discussion threads, surveys, or sign up for their newsletter and news alerts so that you're always in the tech loop!

2. **Stay Safe Online:**

This resource is a little different than the others we'll talk about. This security blog is run by the National Cyber Security Alliance (NCSA), with a mission to educate safe and secure internet use. It provides all sorts of fantastic family friendly advice and resources for parents to teach their children safe online practices.

3. **CNET:**

You may have already checked out CNET in the past while researching technology products. They have all sorts of great reviews for appliances, cameras, computers, and more. Beyond the reviews, however, lies a goldmine of news and information.

Their technology experts cover everything from data breaches to social media privacy. It isn't as jargon heavy or technical as some of the other resources we've included, so if you prefer a more casual tone and easy to digest content, this one's for you!

4. **Schneider on Security:**

This resource came up again and again in recommendations for the best cybersecurity blogs on the web, and it's easy to see why. The blog is run by Bruce Schneider, a superstar in the security field with impressive credentials. He is currently the Chief Technology Officer of IBM Resilient, a fellow at Harvard's Berkman Center, and a board member of EFF (Yes, we warned you, he's a big deal!).

His blog received loads of engagement and discussion, and he personally posts about cybersecurity news on a daily basis. If you're interested in his thoughts, you can also check out his other resources (books, talks, and essays) via the website.

5. **Inside Cybersecurity:**

Inside Cybersecurity is specifically for keeping up to date with federal policies that affect digital security. If you're interested in exploring the links between public policy and cybersecurity, check it out!

6. **Dark Reading:**

Dark Reading is a comprehensive website that covers attacks/breaches, cloud, IoT, mobile, threat intelligence, and more. The blogs are written by IT professionals, and beyond just news and information, you'll find all sorts of great articles about topics like "Best Practice for Recruiting and Retaining Women in Security" and "Leveraging Security to Enable your Business".

7. **Krebs on Security:**

This was another resource that was highly recommended by industry professionals. Brian Krebs, who worked as a reporter for the Washington Post from 1995 to 2009, authoring more than 1,300 blog posts for their "Security Fix" blog, is considered a household name in the information security industry.

On his blog, he provides in-depth security news and investigation, covering topics like "Money Laundering via Author Impersonation on Amazon" and how the "New EU Privacy Law May Weaken Security".

8. **Threat Level:**

If you love "Wired" (an established digital publication focused on technology and gear) and are looking for something a little more stylized, you MUST check out Threat Level.

It covers privacy, crime, and security online, uncovering clever hacks and workarounds that you don't want to miss reading about!
